

Understanding Tropical Soils: Part 4

Adding Biochar to tropical soil changes the soil's nutrient retention capacity immensely.

Jivamritham

Liquid fertilizer made with cow urine and manure is rich in microfauna and can be used to charge Biochar.

At La Pedregoza they produce 200 tons of compost every 10 to 12 weeks, some of which is mixed with biochar when added to soil.

Humanure Handbook

Fertilizer factory at La Pedregosa.

The extension of the branches indicates where the root tips are located on a tree for fertilizing.
